

Leader and Followers Part-2

Introduction

This is the Part-2 of AI Leader and follower and in this part you will learn about how the AI use the halt point between destinations.

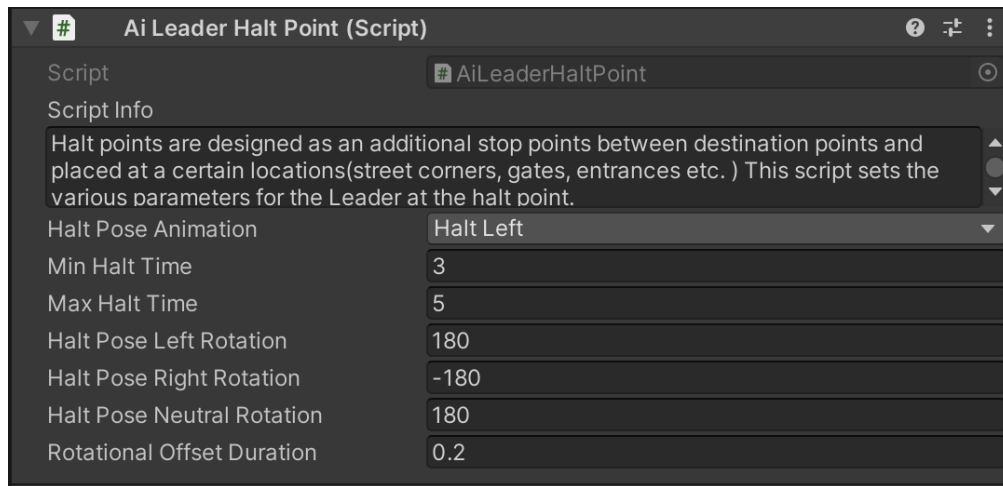

Create Halt Point

To create a halt point for the AI Agent Leader you need to add a component to the destination point called as 'AI Leader Halt Point'. [See the Image Below]

AI Leader Halt Point

Halt points are designed as an additional stop points between destination points and placed at a certain locations(street corners, gates, entrances etc.) This script sets the various parameters for the Leader at the halt point.

Fields	Info
Halt Pose Animation	Animation Clip to be played back by the Leader at the halt point.
Min Halt Time	Minimum halt time in case followers are within separation limit. In case they are not it will be prolonged until they catch up with the Leader.
Max Halt Time	Maximum halt time in case followers are within separation limit. In case they are not it will be prolonged until they catch up with the Leader.
Halt Pose Left Rotation	Value of the leader's rotational offset at the Halt point in degrees to the left from the direction he was facing when approaching this halt point.
Halt Pose Right Rotation	Value of the leader's rotational offset at the Halt point in degrees to the right from the direction he was facing when approaching this halt point.
Halt Pose Neutral Rotation	Value of the leader's rotational offset at the Halt point in degrees to the neutral from the direction he was facing when approaching this halt point.
Rotational Offset Duration	Time it takes for the Leader to turn in the specified direction.
