

Pursue Behaviour

Introduction

This video will guide you on how to achieve AI agent pursue behaviour in case of enemy lost. There are 2 types of pursue behaviour - Stationed and Approaching.

Pursue Type : Stationed

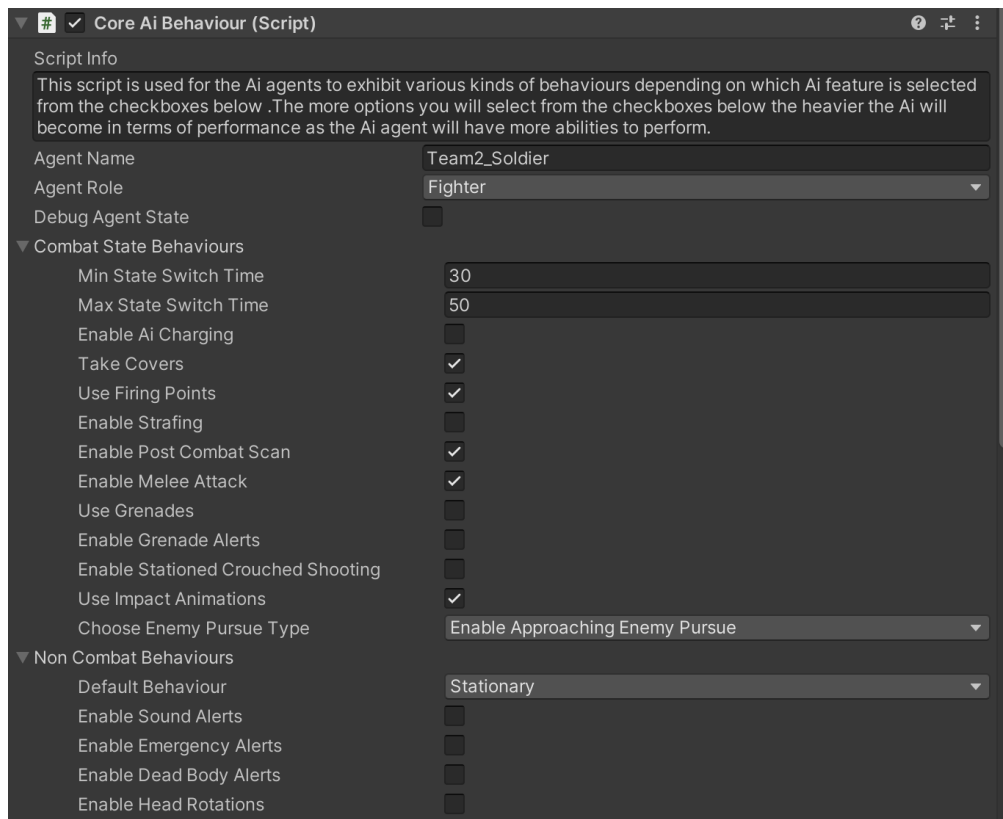

If the selected option is 'Enable Stationed Enemy Pursue' then this humanoid AI agent will be stationed while staring at the last enemy known position for some seconds specified in the Min/Max Stare time fields.

Pursue Type : Approaching

If the selected option is 'Enable Approaching Enemy Pursue' then this humanoid AI agent will be approaching at the last enemy known position. After the Enemy Lost,

'Humanoid AI' agent will first stare at the enemy last known position and then after the stare time is completed agent will start approaching towards the last enemy known position.

Let's talk about three scenarios that can be possible:

Scenario 1 : NavMeshPath Complete

When the NavMeshPath to the enemy is completed the 'Humanoid AI' agent will be sprinting, running and then walking towards the enemy last known coordinate based on the distance.

Scenario 2 : NavMeshPath Partial

When the NavMeshPath to the enemy is partial (Where the target is on the roof) the 'Humanoid AI' agent will create the closest point on the NavMesh from the current target position which is reachable and will be sprinting, running and then walking towards it based on the distance.

Scenario 3 : NavMeshPath Invalid

When the NavMeshPath to the enemy is invalid(Where both the target and the agent is on the opposite sides of buildings) the 'Humanoid AI' agent will make sure to only stare at the enemy current position until the combat state restarted.

Fields	Info
Enemy Pursue Error Radius	This slider sets the offset radius from last seen enemy coordinate. Pursuing Ai will set random coordinate to go to within that radius.
Aimed Scaning At Enemy Last Known Position	This subsection contains the values of aimed turns(scanning) for this agent after arriving at the LastKnownEnemyPosition coordinate. It will playback idle turning clips assigned to respective turning directions for lower body layer inside Animator while playing upper body aiming animation clip for all of those turns.

Turn Direction	Choose one of 4 turning directions from this list. AI agent will play corresponding animation clip from the animation tree that is assigned to this direction.
Min Aimed Turn Animation Speed	Minimal playback speed of the the turn animation clip.
Max Aimed Turn Animation Speed	Maximal playback speed of the the turn animation clip.
Min Time Between Aimed Turns	Minimum time to keep aimed look in the direction that resulted after playing previous aimed animation turn clip, before starting playback of the new turn animation clip.
Max Time Between Aimed Turns	Maximum time to keep aimed look in the direction that resulted after playing previous aimed animation turn, before starting playback of the new one.
Min Scan Completion Time	Minimum time to keep aimed scanning before switching to non combat state.
Max Scan Completion Time	Maximum time to keep aimed scanning before switching to non combat state.
Play Animations Sequentially	If checked scan animations will playback sequentially. In case unchecked the scan animations will playback randomly.
Aimed Turning Animations	Create up to 4 turning directions for AI agent to perform during aimed scanning.
Min Near Stopping Distance	Minimum distance to stop near the Pursue point and to consider it as reached.
Max Near Stopping Distance	Maximum distance to stop near the Pursue point and to consider it as reached.
Min Sprint Distance	Minimal remaining distance to pursue point for the switch from walking or running to sprinting towards it.

Max Sprint Distance	Maximum distance for sprinting towards coordinate.
Min Run Distance	Minimal remaining distance to pursue point for the switch from walking or sprinting to running towards it.
Max Run Distance	Maximal remaining distance to pursue point for the switch from walking or sprinting to running towards it.
Min Walk Distance	Minimal remaining distance to pursue point for the switch from running or sprinting to walking towards it.
Max Walk Distance	Maximal remaining distance to pursue point for the switch from running or sprinting to walking towards it.
Min Stare Time At Enemy Last Known Position	Minimum staring time of any non Stationed AI agent at the last known position of the enemy before beginning pursue.
Max Stare Time At Enemy Last Known Position	Maximum staring time of any non Stationed AI agent at the last known position of the enemy before beginning pursue.
Debug Pursue Distances	This sub section contains values which show the distance to the last known position of the enemy.
Debug Distance To Coordinate	Debug the distance to coordinate(Enemy Last Known Position) to reach
Debug Sprint Distance	Debug the sprint distance to coordinate(Enemy Last Known Position) to reach
Debug Run Distance	Debug the run distance to coordinate(Enemy Last Known Position) to reach
Debug Walk Distance	Debug the walk distance to coordinate(Enemy Last Known Position) to reach
