

Artillery Support

Introduction

This video will guide you on how to setup the artillery support for the player.

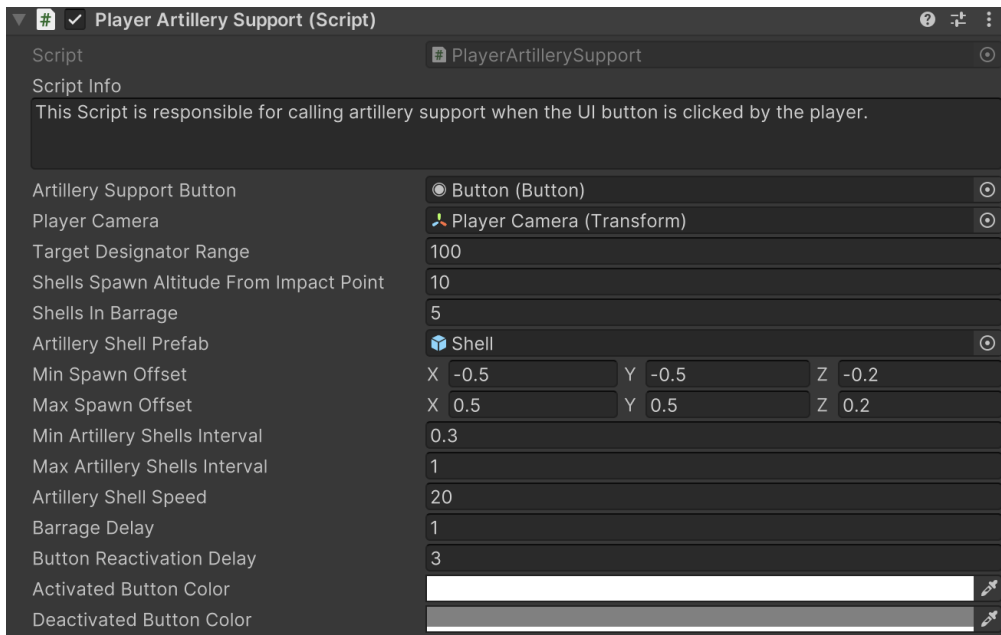

Player Artillery Support Setup

Go to Tools < Mobile Action Kit < Player < Player < Create Artillery Support and assign the necessary gameObjects and components like shown in the video above. Your setup should look like this [See the image below].

Player Artillery Support Script

This Script is responsible for calling artillery support when the UI button is clicked by the player.

Fields	Info
ArtillerySupportButton	Drag and drop the UI button from the hierarchy into this field.
PlayerCamera	Drag and drop the player's camera attached to the player hierarchy into this field.
TargetDesignatorRange	Range within which the player can designate the target for artillery support.
ShellsSpawnAltitudeFromImpactPoint	Artillery shells spawn altitude above the target point surface.
ShellsInBarrage	Number of artillery shells in a barrage.
ArtilleryShellPrefab	Drag and drop the explosive prefab from the project into this field.
MinSpawnOffset	Minimal positional offset from the target point between falling artillery shells.
MaxSpawnOffset	Maximal positional offset from the target point between falling artillery shells.
MinArtilleryShellsInterval	Minimal time interval between falling shells.

MaxArtilleryShellsInterval	Maximal time interval between falling shells.
ArtilleryShellSpeed	Speed of incoming artillery shells.
BarrageDelay	Delay before the barrage starts.
ButtonReactivationDelay	Artillery support button reactivation time since previous use.
ActivatedButtonColor	Specify the color of the UI button when it is interactable.
DeactivatedButtonColor	Specify the color of the UI button when it is not interactable.
