

Player Health Setup

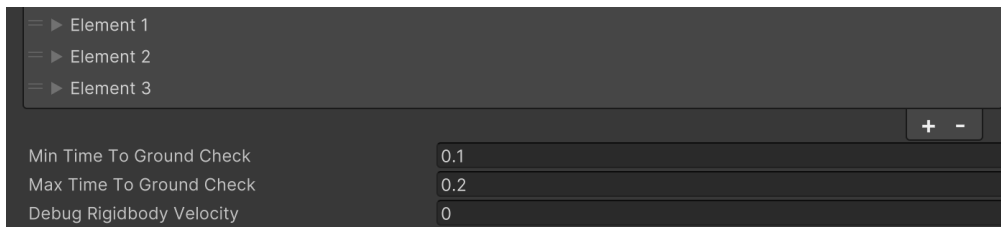

Introduction

This video will help you understand the Player Health script with examples in Play mode.

Player Health

This Script Regulates The Player Health In game.

Fields	Info
RigidbodyComponent	The Rigidbody component of the player, used to detect falls and calculate velocity.
FirstPersonControllerScript	Reference to the FirstPersonController script, used to check player movement and grounding.
PlayerHealthbar	The player's health bar, used to display and manage the player's health status.
DamageEffectScreensFadeOutDuration	The duration for the fade-out effect of damage indicators on the screen.
TimeBetweenDamageEffectScreens	The minimum time interval between damage indicator effects on the screen.
MinHealthToCheck	The minimum health value at which this effect is triggered.
MaxHealthToCheck	The maximum health value at which this effect is triggered.
RotateImpactEffectBloodScreens	Enable or disable rotation of blood screen effects.
MinImpactEffectBloodScreenAngle	The minimum angle for rotating blood screen effects.
MaxImpactEffectBloodScreenAngle	The maximum angle for rotating blood screen effects.
ScaleImpactEffectBloodScreens	Enable or disable scaling of blood screen effects.

MinImpactEffectBloodScreenScale	The minimum scale for blood screen effects.
MaxImpactEffectBloodScreenScale	The maximum scale for blood screen effects.
DamageEffectUIImages	The array of UI images used for blood screen effects.
TemporaryDamageEffectBloodScreens	A list of temporary damage effect properties based on the player's health.
UIToDeactivateOnDie	UI elements to deactivate when the player dies.
AllWeaponsRoot	The root object for all weapons, to deactivate upon death.
DeadArmsObj	The player's dead arms object, activated upon death.
DeadArmsRotation	The rotation of the player's arms when dead.
DeadArmsPosition	The position of the player's arms when dead.
DeadArmsMoveDuration	The duration for moving the player's arms to their dead position.
DeadArmsRotationDuration	The duration for rotating the player's arms to their dead rotation.
PlayerBobber	The player bobber object, for simulating a death bob effect.
PlayerBobberPosition	The position of the player bobber when the player is dead.
PlayerBobberRotation	The rotation of the player bobber when the player is dead.

PlayerBobberMoveDuration	The duration for moving the player bobber to its dead position.
PlayerBobberRotationDuration	The duration for rotating the player bobber to its dead rotation.
PlayerCamera	The player camera object, for simulating death animations.
PlayerCameraPosition	The position of the player camera when dead.
PlayerCameraRotation	The rotation of the player camera when dead.
PlayerCameraMoveDuration	The duration for moving the player camera to its dead position.
PlayerCameraRotationDuration	The duration for rotating the player camera to its dead rotation.
GameObjectToActivateOnMissionFail	Game objects to activate upon mission failure.
GameObjectToDeactivateOnMissionFail	Game objects to deactivate upon mission failure.
PlayerDieProperties	Properties for handling player death animations and effects.
PermanentDamageEffectBloodScreens	A list of permanent damage effect properties based on health ranges.
MinimumRigidbodyVelocity	The minimum velocity of the Rigidbody for a fall to cause damage.
MaximumRigidbodyVelocity	The maximum velocity of the Rigidbody for a fall to cause damage.
HealthToReduceInPercent	The percentage of health to reduce upon falling within the velocity range.

FallingProperties	A list of fall damage properties based on Rigidbody velocity.
MinTimeToGroundCheck	The minimum time to check if the player is grounded after falling.
MaxTimeToGroundCheck	The maximum time to check if the player is grounded after falling.
DebugRigidbodyVelocity	Debug value to monitor the Rigidbody's vertical velocity.
