

Player HUD Settings

Introduction

This video will guide you on how to setup the player HUD settings which allow to drag and resize player UI in runtime. Go to Tools < Mobile Action Kit < Player < Player < Create HUD Settings.

Create HUD Settings

Assign the necessary gameObjects and components like shown in the video above. Your setup should look like this [See the image below].

Following the steps in the tutorial above you will find the HUD settings gameObject with a script component 'HUD Settings' added as well as 'Resize Image script' and 'Drag Image Script' added to the selected UI in wizard.

HUD Settings

This script allows users to enable/disable resizing and dragging of UI elements in the game HUD. It also provides options to save, reset, and edit HUD settings.

Fields	Info
HudSettingsPanel	The main panel containing the HUD settings UI.
PausePanel	The pause menu panel that should be disabled when editing HUD settings.
HudActivatorButton	Button that opens the HUD settings panel.
DragButton	Button to enable dragging mode for UI elements.
ResizeButton	Button to enable resizing mode for UI elements.
SaveButton	Button to save the current HUD layout and settings.
ResetButton	Button to reset the HUD layout to default settings.

Resize Image

This script enables users to resize a UI image dynamically using touch or mouse drag. The size is saved and restored using PlayerPrefs, and default values are stored for resetting.

Fields	Info
UniqueNameToSaveResizing	Unique key to store and retrieve the resized dimensions in PlayerPrefs.
minSize	Minimum allowed size of the image.
maxSize	Maximum allowed size of the image.

Drag Image

This script enables dragging UI elements within a defined parent container. The position is saved and loaded using PlayerPrefs.

Fields	Info
UniqueNameToSaveDragging	A unique identifier used to save and retrieve the dragging position from PlayerPrefs.
