

Melee Attack

Introduction

This video will help you understand how to setup the player melee.

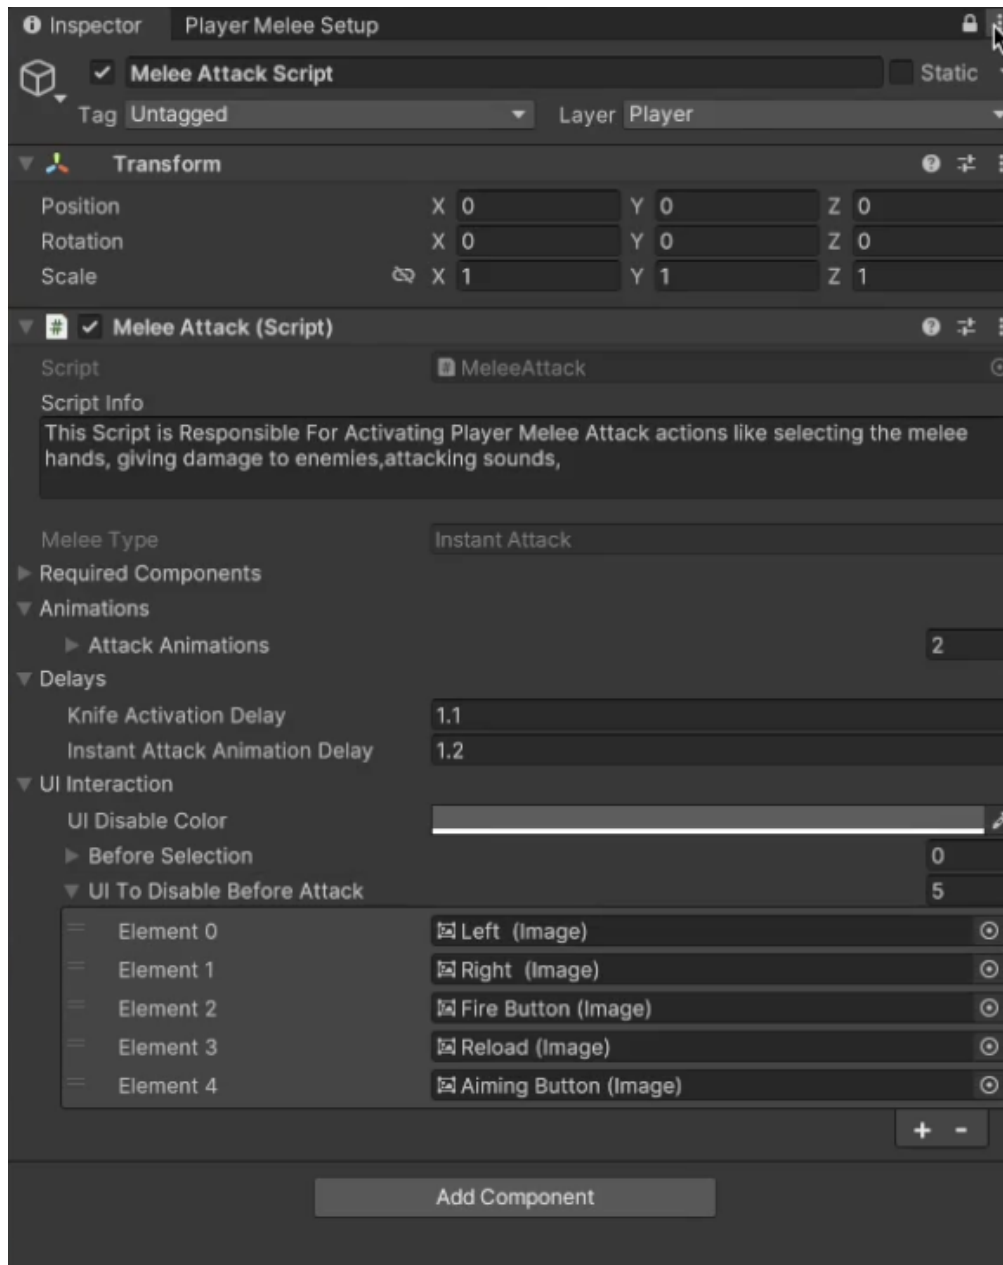

Player Melee Setup

Go to Tools < Mobile Action Kit < Player < Melee < Player Melee Setup and assign the necessary gameObjects and components like shown in the video above. Your setup should look like this [See the image below].

Melee Attack Script

This script is responsible for player Melee attack actions.

Fields	Info
MeleeType	Indicates the type of melee attack. 'Instant Attack' is the default.
RequiredComponents	Container for all the required components for the melee attack system.
MeleeUIButtons	List of buttons in the UI that trigger melee attacks.
MeleeAnimatorComponent	Animator component used to play melee animations.
MeleeIcon	Icon that represents melee functionality in the UI.

AudioSourceComponent	Audio source used to play melee-related sounds.
Animations	Container for all melee attack animations and their configurations.
AttackAnimations	List of melee attack animations available for this system.
MeleeDamageScripts	Scripts that handle melee damage for this attack.
AttackAnimationClip	Animation clip to play for this melee attack.
AttackAudioClip	Audio clip to play during this melee attack.
DelayDamage	Delay before applying damage after the animation starts.
Delays	Delays for different actions within the melee attack system.
KnifeActivationDelay	Time to wait before activating the knife in a melee attack.
InstantAttackAnimationDelay	Delay before starting an instant attack animation.
UIInteraction	Handles interactions and UI changes during melee actions.
UIDisableColor	Color to apply to disabled UI elements (e.g., gray).
BeforeSelection	UI images to disable while melee hands are activated (e.g., during weapon removal animation).
UIToDisableBeforeAttack	UI images to disable while the melee attack animation is playing.
